

Nuclear Structure and Function, Volume 53 (Methods in Cell Biology)

This volume is a comprehensive guide to the methodologies used in the study of structural domains of cell nuclei. The text covers chromatin, the karyoskeleton, the soluble domain, and the nucleolus. It details methods that are used to isolate components from these domains and techniques used to assemble and disassemble nuclear elements. There is also coverage of three-dimensional mapping and localization of nuclear processes.

Key Features* Provides a practical laboratory guide for studying cell nuclei* Includes comprehensive and easy-to-follow protocols
